

Supplementary Fig. 4. Kaplan-Meier analysis of OS, PFI, and DSS in six representative subgroups. Age, >40 years or ≤40 years; WHO grade G2 or G3; and IDH status, mutated or wild-type for OS (A-F), PFI (G-L), and DSS (M-R). OS: overall survival, SMS: spermine synthase, HR: hazard ratio, CI: confidence interval, WHO: World Health Organization, IDH: isocitrate dehydrogenase, Mut: mutation, WT: wild type, PFI: progression-free survival, DSS: disease-specific survival.

Supplementary Fig. 4. Continued.
